

Tyre Safety Tips

Why should you check your tyres?

Did you know that you are not insured when driving on illegal tyres? If you are involved in an accident and it turns out that you have been driving around on tyres with a tread depth lower than 1.6mm you could find yourself forking out a lot of money on repairs and fines. Worn tyres significantly impede the performance of your car - low tread depths reduce the effectiveness of braking, steering, and acceleration, all of which are vital in staying safe. What are a few minutes put aside now to check your tyres, when you compare it to your own safety and that of your family?

What Should I Check?

Check overall condition of tyres, including inner and outer sidewalls.

Check tyre tread depth.

Check all tyre pressures.

Check signs of irregular wear.

Check and examine the spare tyre.

Wheel Alignment

Wheel Balancing

Tyre Rotation
